

Swaying Reed

Steel rod

A very esthetic light fixture to give a beautiful light scheme in both indoor but mainly outdoor environments, where the wind will catch the reed and make it sway in the breeze.

The metal spring structure makes the reed resistable and flexible for strong winds and useful in public spaces and open areas where it can be enjoyed in parks, ponds, gardens, open spaces as well as hotel gardens, spas, malls, city centers, etc.

The reeds come with a very solid mounting bracket and connection to fibre harness. The harness must be specified separately due to decisions on lengths. The design and dimension of this standard range can be modified for a custom product request.

Swaying Reed

- For outdoor and indoor use
- Black/clear
- Height customised on request (Max 1.25 m)
- Developed for outdoor environment
- Fibre optical system
- diff. Top versions on request
